May 16, 2012

Dear President Obama;

Given the continuing gridlock in Congress, we are writing to urge you to take executive action to ensure that high-risk chemical facilities fulfill their obligation under the Clean Air Act to prevent the catastrophic release of extremely hazardous chemicals. According to chemical facility reports to the Environmental Protection Agency (EPA), more than 480 chemical facilities each put 100,000 or more people at risk of a poison gas disaster. In 2004, the Homeland Security Council projected that an attack on a poison gas facility would kill 17,500 people, seriously injure 10,000 more people, and send an additional 100,000 people to the hospital. In 2006, you referred to these hazards as “**stationary weapons of mass destruction spread all across the country.**”

Later in 2006, Congress passed a 740-word law which temporarily authorized the Department of Homeland Security (DHS) to issue new rules now called the Chemical Facility Anti-Terrorism Standards. Unfortunately this statute explicitly bars the DHS from requiring any specific “security measure,” including the most fool-proof measure: safer chemical processes that can eliminate catastrophic poison gas hazards. It also exempts thousands of chemical facilities, including approximately 2,400 water treatment facilities and hundreds of port facilities, including the majority of U.S. petroleum refineries.

In 2009, to correct the flaws in the 2006 law, the DHS and EPA asked Congress for new authority to require high-risk chemical facilities to assess safer chemical processes, and for the highest risk facilities to implement safer processes where feasible. In addition, the DHS and EPA asked Congress to eliminate the exemptions for water treatment and port facilities. In November 2009, the House of Representatives adopted a comprehensive bill (H.R. 2868) that would have corrected these fatal flaws. Since then, this legislation has been blocked by the petro-chemical lobby and their allies in Congress.

Until Congress acts responsibly, the only way to ensure communities are protected from chemical disasters is to fully enforce the 1990 Clean Air Act. The Clean Air Act's "general duty clause" obligates all chemical facilities to be designed and operated to prevent catastrophic chemical releases. By issuing new rules and guidance, the EPA can both prevent accidental chemical disasters and reduce the attractiveness of these facilities as terrorist targets.

In 2002, the EPA drafted just such a proposal that would have made chemical facilities **"inherently safer by reducing quantities of hazardous chemicals handled or stored, substituting less hazardous chemicals for extremely hazardous ones, or otherwise modifying the design of processes to reduce or eliminate chemical hazards."** Tragically, the Bush administration scuttled this plan.

In a March 14, 2012 letter, the National Environmental Justice Advisory Council (NEJAC) urged EPA Administrator Lisa Jackson to adopt such a proposal, saying **"the Clean Air Act's prevention authority will not only eliminate accidental hazards but will also address fatal flaws in the current chemical security law..."**

On April 3, 2012, former EPA Administrator Gov. Christine Todd Whitman also wrote Administrator Jackson. Whitman said the 2006 law **"is extremely limited"** in preventing chemical disasters and concluded by saying, **"I therefore fully support the implementation of the NEJAC recommendations and any other authorities you can apply to reduce these hazards before a tragedy of historic proportions occurs."**

Fortunately, safer cost-effective chemical processes are widely available. Since 2001, hundreds of chemical facilities have switched to safer chemical processes and eliminated these risks to 40 million people in 47 states. And in November 2009, the Clorox Company announced plans to convert all of its U.S. facilities. While this is encouraging, reliance on voluntary efforts has left more than 100 million people in the U.S. at risk because they live and work inside "vulnerability zones" surrounding the high risk chemical facilities.

Businesses are also negatively impacted. Due to their potential liability for hauling poison gases, the Association of American Railroads issued a statement in 2008 saying, **"It's time for the big chemical companies to do their part to help protect America. They should stop manufacturing dangerous chemicals when safer substitutes are available..."**

In the Senate you were a leader on preventing chemical plant disasters. And in *Change We Can Believe In* your 2008 campaign promised that **"An Obama Administration will...Secure our chemical plants by setting a clear set of federal regulations that all plants must follow, including improving barriers, containment, mitigation and safety training, and wherever possible, using safer technology, such as less toxic chemicals."**

We respectfully urge you to use your authority under the Clean Air Act to ensure the use of safer chemical processes to eliminate these catastrophic hazards wherever feasible, whether they are triggered by accident or terrorism. We look forward to working with you and your staff on this critical initiative.

Sincerely,

Peg Seminario
